Strong partnership in the Polish offshore market: Omexom in Germany and OCE sign cooperation agreement

New partnership combines in-depth local market knowledge with strong technical project management expertise. The aim is to enable faster and more efficient development, operation and maintenance of new offshore wind projects in Poland.

Omexom in Germany has entered into a strategic partnership with **Ocean Connect Energy (OCE)**. Together, the companies aim to combine their expertise in consulting and planning offshore wind projects in Poland. The primary focus lies on the early stages of project development. In addition, the cooperation extends to later phases from commissioning through to operations and maintenance (O&M). The partnership is designed to accelerate and optimise current and future offshore wind projects in Poland, including the enhancement of operations and maintenance. In the long term, this will strengthen Poland's energy independence and contribute to a reduced carbon footprint.

Ocean Connect Energy is a development service provider specialising in the planning and preparation of offshore wind and energy projects. Founded in 2023, the company is headquartered in Warsaw, with additional offices in Europe and North America. OCE combines extensive experience in project development with in-depth knowledge of local markets and regional requirements. In doing so, the company takes equal account of the interests of shareholders and other stakeholders, integrates their requirements at an early stage into project planning, and ensures a structured balancing of differing interests. This enables OCE to develop projects in a focused way and advance them efficiently.

"In OCE, we have gained an ideal partner with comprehensive knowledge of the Polish market. In particular, the company's collaborative approach ensures that the interests and requirements of all target groups are aligned in the best possible way. The resulting trust fosters broad consensus and facilitates approval procedures, laying the foundation for efficient project delivery," says **Irina Lucke, Managing Director and Head of the Offshore Business Area at Omexom Germany**. "We look forward to working closely with OCE to further advance the expansion of offshore wind in Poland."

The cooperation between Omexom, VINCI Energies' brand for energy infrastructure, and OCE is project-based and structured in clearly defined stages: OCE is primarily responsible for the early phase of project development, including initial feasibility studies. Omexom subsequently assumes responsibility for advanced project planning and, drawing on its longstanding experience, supports the entire lifecycle of an offshore project—from consulting and engineering through operations and management to maintenance and safety training.

"Omexom's longstanding experience and expertise provide a strong foundation for addressing the technical challenges of offshore wind projects at an early stage of planning. This streamlines subsequent project phases and enhance overall efficiency through well-coordinated processes," says **Anna Barcikowska, Managing Director at OCE**. "We welcome the cooperation with Omexom and look forward to joint projects that will advance the expansion of a reliable and climate-neutral energy supply in Poland."

About Omexom:

Omexom is VINCI Energies' brand for energy infrastructure. Omexom supports its customers in delivering the energy transition and works alongside them to develop solutions for sustainable energy and mobility infrastructure. Its service portfolio covers the full spectrum of energy infrastructures: from engineering through to the maintenance of facilities for power generation, transmission and distribution, including energy-related services for municipalities and local authorities.

In Germany, Omexom operates nationwide for network operators, municipal utilities, municipal energy suppliers, trade and industry, as well as Deutsche Bahn. With 4,500 employees across 87 business units, Omexom Germany generated revenue of approximately €1 billion in 2024.

About Ocean Connect Energy:

Ocean Connect Energy (OCE) is a professional offshore project development company. It is comprised of experienced professionals from the offshore wind energy sector and supply chain with the combined team experience of more than 70 years in offshore renewables. The team is experienced in initiating, managing and implementing projects through major milestones, such as auction preparation and site control, environmental decisions, construction permits, Financial Investment Decisions (FID) and Commercial Operation Date (COD).

With a focus on community and local development, Ocean Connect Energy leverages its relationships and experience regionally to ensure project acceptance, durability and profitability. OCE asserts best practice in development while embracing innovation to respond to local conditions and priorities, to identify and mitigate risk, and to coordinate project benefits within the communities in which the team works.
